

# Software Development

## June 29

- **Task:** Project Initialization and UI Wireframing
- **Details:** Started the development of the *AUMOVIO One IT Central Hub*. Designed the layout structure and drafted the initial HTML wireframe to align with the company's branding and layout guidelines.

## June 30

- **Task:** HTML Structure and Layout Development
- **Details:** Structured the core layout components. Created the responsive navigation menus, section grids, and interactive cards for each of the IT services to prepare them for dynamic linking.

## July 1

- **Task:** Navigation Scripting and Routing Logic
- **Details:** Wrote the core JavaScript functionality for the hub. Programmed the click-event listeners and navigation scripts so that selecting any IT service card seamlessly directs users to its designated external tool or resource link.

## July 2

- **Task:** Link Integration and Local Debugging
- **Details:** Populated the portal with the correct regional service URLs and endpoint links. Tested the redirection logic locally to ensure that all navigation buttons successfully open their respective corporate destinations without errors.

## July 3

- **Task:** Interface Optimization and Final Testing
- **Details:** Refined the styling and cleaned up the HTML code for optimal performance. Conducted final testing across different screen resolutions to guarantee that the portal's navigation remains completely responsive and functional for all users.

## Technical Documents

**June 29.** We provided helpdesk assistance to resolve daily employee issues, focusing on "No Network" connectivity by updating drivers and deploying system patches. We also distributed laptops to employees, ensuring they signed the User Acceptance Form before releasing the units.

**June 30.** Our team focused entirely on user support for the day, assisting various employees across different departments with troubleshooting and resolving technical concerns on their corporate laptops.

**July 1.** We assisted employees with technical requests, including migrating and transferring user files from external flash drives onto their laptops. Additionally, we executed the "re-ds" system imaging process to prepare backup laptops for the employee borrowing program.

**July 2.** We performed "re-ds" imaging and setup on deployment laptops and handled incoming employee tickets. We also managed inventory logistics by retrieving printer toners from the warehouse, scanning each unit's serial number for tracking, and deploying them to their respective stations.

**July 3.** We executed "re-ds" system imaging and post-setup configurations on laptops while managing standard user support tickets. We concluded the session by issuing loaner laptops to employees and securing their signatures on the User Acceptance Forms prior to deployment.
