

Technical Documents:

June 15. We executed the "re-ds" system imaging and post-setup on deployment laptops. We also managed loaner laptop distribution for various departments, ensuring employees signed User Acceptance Forms before releasing the hardware, and updated their status to "Deployed" in the excel inventory and monitoring sheets.

June 16. We performed "re-ds" imaging and configurations on laptops for deployment, released units to employees upon signing compliance forms, and resolved "No Network" concerns. We fixed connectivity issues by deploying patches, running gpupdate /force in CMD, enabling accounts in Active Directory, and updating network drivers.

June 17. We provided active helpdesk support to assist employees with their day-to-day technical concerns. Alongside user troubleshooting, we performed network directory maintenance by locating and disabling laptop asset accounts within Active Directory for devices that are no longer in use or belonged to resigned employees.

June 18. We guided employees through technical inquiries, specifically instructing them on the proper workflow and protocols to request corporate internet access. We concluded the day by handling various helpdesk ticket escalations and performing troubleshooting to resolve software and hardware issues.
